Abstract

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object default and inner stress & temperature etc. many physical and chemistry both aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena explanation and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government constitution even institution by institute and making house and devices etc. a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and that old

low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making. So the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory's new-quality-productivity equipment produced with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics etc.. Those new interdisciplinary departments will occupy the new subjects so as to enhance our fringe-regional research & development and cross-disciplinary one searching and improvement.

Keywords: Progressing high-technique equipment GDP systems; By sustainability; An innovated searching

INTRODUCTION

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So, we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceeded by the similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating

its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nation's industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavor to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept (research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~20]

DISCUSSIONS

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [21~22]

1. Five nations goods importation amount analysis

The five nations goods importation amount changes status might show 101 & 136 billion dollars by Britain & Japan correspondingly in 1981 according to the Figure 1 to express the latter China good goods importation value. Additionally, the y-y value might afford -6% & -4% by them accordingly exhibited their minus backward importation value.

Figure 1 Five nations goods importation amount status. [1]

2. China top cities GDP comparison

The China top cities GDP amount analysis might show 695~373 billion dollars by Beijing~Suzhou city correspondingly in 2024 indicated the Beijing city upwards economic momentum in light of the Figure 2. Meantime, the y-y value might exhibit 5.8%~6.3% by them accordingly realized the Shenzhen city forwards developed pace with 6.2% following Suzhou city.

Figure 2 China top cities GDP analysis I. [2]

The China top cities GDP amount analysis might show 330~260 billion dollars by Chengdu~Nanjing city correspondingly in 2024 indicated the Chengdu city upwards economic momentum in light of the Figure 3. Meantime, the y-y value might exhibit 6.6%~5.7% by them accordingly realized the Hangzhou city forwards developed pace with 7% exceeding Chengdu city.

Figure 3 China top cities GDP amount analysis I. [2]

At the end, the China top cities GDP amount analysis might show 628~410 billion dollars by Beijing~Guangzhou city correspondingly in 2021 indicated the Beijing city upwards economic momentum according to the Figure 4. Meantime, the y-y value might exhibit 7.3%~8.6% by them accordingly realized the Guangzhou city forwards developed pace with 8.6% exceeding Beijing city.

Figure 4 China top cities GDP amount analysis II. [2]

Summarily, from the above database and analysis the Nanjing demonstrated a robust growth trajectory, with its year-over-year increase aligning closely with Hangzhou's performance. This suggests that while Chengdu maintains strong absolute economic volume, the comparative growth rates highlight a competitive landscape among these major urban centers. The data underscores the nuanced dynamics of regional development, where absolute scale and growth speed offer distinct insights into each city's economic health and future potential within the broader national context. It would be believed that the urban cities with the huge industrial structures and high-technique talents and scientists & fellows in related units might wield constantly economically developed tendency following the main cities trajectories with possessing strong secondary and tertiary industries base, especially in the outstanding tertiary one like high-end making, high-technique equipment, artificial intelligence robot industries, even commercial astronautic exploration & quantum computer research, information technology with 5G communications, MRI(magnetic resonance imaging) medical technique & 3-D printing with other emerging recently etc.

CONCLUSION

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object default and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government constitution even institution by institute and making house and devices etc. a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and that old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional -equipment making.

Article Publication Details

This article is published in the [OpenMind Journal of Multidisciplinary Innovation & Development](#), ISSN: 3108-2920 (Online). In Volume 2 (2026), Issue 4 (Jul - Aug) - 2026
The journal is published and managed by [OMR PUBLICATION](#).
